UDAPEOPLE

The organization leading the future of HR

Introduction

This proposal is to offer the following…

- What the technical concept of DevOps can bring to your organisation
- The benefits of a CI/CD pipeline from a business standpoint
- How Udapeople can maximise revenue and efficiency

DevOps

What is DevOps?

Simply put DevOps is a concept which minimizes the bridge between both of your teams namely: Development and Operations.

How does this work?... We'll show you

CI/CD

- What is CI/CD?

- In short CI is Continuous Integration and CD is Continuous Deployment
  - Continuous Integration is when your developers are merging code several times a day. Its easier to merge these changes when we have an infrastructure in place that prevents potential conflicts, which in essence reduces the need for time-consuming communication between developers.
  - Continuous Delivery is a Engineering Mindset Paradigm – More about the approach
  - Continuous Deployment is where value is delivered contiguously through automating deployments

Benefits of CI/CD (Technical)

- You will be investing more time in delivering value rather than the cycle itself

- Prevents code getting lost in botched merges

- Prevent the time consumption from merge issues

- Manual Deployment increases chances of errors by human tasks

- Detected security vulnerabilities earlier

- Automate infrastructure creation

- Faster and more increased deployments

- Automated tests

Value to UDAPEOPLE Business

- Reduce cost from hiring more resources to handle merging code as less time is spent on issues from new code commit

- You are able to avoid potential significant costs as you can prevent security vulnerabilities by detecting them earlier, these can be costly.

- Reduce costs through automating infrastructure costs, there are less costs as a result from unused resources

- Increase revenue through making your customers happy as you have far more quicker frequent deployments, therefore gaining customers/keeping customers

- Protect Revenue through automated tests, you are reducing downtime from a bug and effectively keeping your sparkly reputation intact.
